

Ingenious solutions.

Insights – Discoveries – Experiences

We don't need to trouble Newton these days for an explanation of gravity – or for advice on how to counteract some of its effects. When it comes to aircraft construction we are well aware of the answers. Our solution is to use lightweight structures – and this subject informs and motivates us in our everyday work. In what we design, in what we plan and in what we construct for you. We would like to thank you for your interest in our company and our solutions. Once you discover our ideas and get to know us better, we're sure you'll want to talk to us – for our mutual benefit. Welcome to Bucher!

Lightweight construction – with passion and innovation.

Success stories begin with fresh new ideas and a healthy amount of passion. And this is just how the Bucher company started in 1953 in Fällanden, Switzerland. An important innovation soon made Bucher products quite unique. This innovation consisted of using lightweight aluminium structures which brought significant cost benefits in aviation and other industrial sectors. Even more so when the equipment was developed and manufactured to specific customer and market requirements by motivated professionals working with extreme efficiency and precision. Whether in engineering, production or project management, the spirit of innovation and passion for our customers and their requirements continue to spur us on. This spirit is evident in all of our solutions.

Flying with a minimum of weight and maximum stability. This was the idea that shaped Heinrich Bucher's thinking when he founded the company. Since then it has continued to grow, as evidenced by the steady expansion of the operation in Fällanden. Today we are still following Heinrich Bucher's basic idea with a unique lightweight construction principle and are now able to offer a wide and varied product range thanks to our many years of experience with aluminium and plastics. Discover our product range here.

“When every handle fits properly, our work is much easier. Because of this it’s a real joy to use these galleys and trolleys.”

Intelligent catering solutions.

One of the key success factors in international air passenger transport is first-rate customer service, which naturally also includes in-flight catering. Culinary quality obviously plays an important role, as does the operational efficiency of preparation and distribution. And it's here that the ease of use of Bucher galleys and trolleys makes a big impact. With their solid, modular design they ensure low maintenance costs over many years of use. One more reason to choose our solutions. Another reason is the way in which we involve our customers in the product development process – to the benefit of both parties. Finally, our many years of experience is an obvious plus point in any decision-making process.

"This seat gives me a real sense of well-being. No doubt because of all the intelligent, practical equipment."

Well-being in the cabin – made easy.

Passengers should experience a sense of well-being in the cabin. When they first get on the plane, the lockers for clothing and items of luggage should be easy to open. Having taken their seats, they should then enter an environment that promises comfort and entertainment with cleverly arranged trays that offer a generous amount of space, and with monitors for unspoiled video enjoyment, made possible thanks to the intelligent arm design. We are currently developing further customer-specific solutions for other applications and creating passenger well-being with simple, intelligent products.

"Bucher equipment proves its qualities every day in challenging practical situations."

More benefits in special cases – lightweight solutions.

You need the right equipment to cope with special situations, particularly when it comes to air rescues or transporting patients by air. We have responded to these requirements with a wide range of special equipment – from the 16g compatible stretcher through to much more complex solutions for rescue helicopters and air ambulances as well as modules for medical first aid in scheduled passenger aircraft. This know-how has also helped us in the development of tactical police equipment. In all applications lightweight structures and creative, refined designs ensure maximum efficiency. These clearly reflect our key objective – to offer advice and support that systematically addresses customer requirements.

"When I'm travelling by plane or car, I like to use the time to get a few things done. Thanks to the cleverly designed Bucher equipment, this is much easier to do."

New travel dimensions – meeting all challenges.

These days there are all sorts of options for land and air travel. People who want exclusive standards of comfort choose special forms of road and air travel, e.g. high-class automobiles and private planes. And we offer customer-specific equipment for both types of transport such as folding tables, on-board lockers fitted with sophisticated closures, roller shutters or doors. All fittings are of course realised to the highest standards using our typical materials – and with a finish that's tailored to customer requirements. Our solutions ensure carefree travel, offer a combination of comfort and functionality and also provide a relaxed working environment. We are opening up new dimensions in travel.

It's easy to find us because we're right where you need us most. Find out more about our company, our products and our services. You'll be impressed. We look forward to hearing from you.

"Anyone without enough talent to construct lightweight solutions can still manufacture heavyweight equipment."

Tristan Bernard
