

## Antiviral Galley Kit

### Antiviral measures – safer environment

Throughout any given flight crew and passengers come in constant contact with handles, latches, and work surfaces. The Antiviral Kit from Bucher Leichtbau will help you reduce the spread of germs in the Galley area by disinfecting surfaces and providing dispensers for masks and hand sanitizer. This long term yet simple solution can be obtained as an upgrade kit.

#### Antiviral Surfaces – for handles and latches

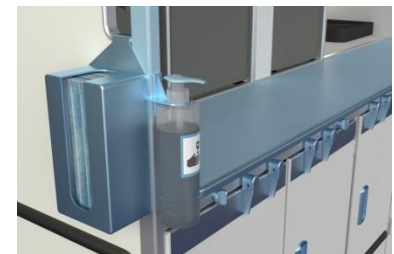

- Disinfecting surfaces such as Nano silver coatings, copper based coatings, mineral coatings, PVD coatings and surface treatment applicable by hand will be applied to specific Galley surfaces.
- Long term effectiveness against pathogenic germs has been proven by several studies.

Antiviral Surfaces for Handles and Latches

#### Dispensers – for hand sanitizer and face masks

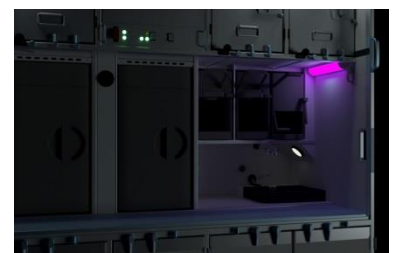

- Easily accessible disinfectant for passengers and crew to increase awareness and cleaning.
- Self-service face mask dispenser to guarantee maximal safety.
- Detachable single unit for taxi, take-off and landing.

Dispenser for Hand Sanitizer and Face Masks

#### Disinfecting UV Lights – for working areas

- UV lights (405nm) are germicidal but safe for humans.
- Disinfecting lights can be used during normal operation as well as during aircraft layovers or overnight.
- Various sizes as well as flexible configurations are available for installation within the cabin.

Disinfecting UV-light

Our aluminum based Galleys are ideal for the Antiviral Kit due to its electrically conductive surfaces and resistance to UV light, moisture and corrosion. For further information please contact us at [bucher@bucher-group.com](mailto:bucher@bucher-group.com) or by phone on +41 44 806 24 24.
