

Partition Walls

Clear separations – more differentiation

One of the most important elements in the airplane is the partition wall. They are placed in various parts of the aircraft and are individually implementable anywhere in the cabin – not only between the different types of travel classes, but also between seat rows and monuments or galleys. Moreover, the design and certification of the partitions are critical in regard to safety issues such as rapid decompression, emergency exit paths and evacuation procedures. That's why we produce our partitions with our unique, tried and trusted high-quality lightweight materials.

As with all our products, expect typical Bucher Swiss quality and reliability.

Our partitions feature well-known advantages such as:

- Singular and well-established lightweight materials
- Modern design with certification regarding all safety issues
- Individually usable for all parts of the aircraft
- Customizable to your needs

With our lightweight partition solutions, airlines are able to reduce the weight in their aircraft even more and thus simultaneously reduce greenhouse gas emissions and save fuel. Our partitions are already integrated perfectly in all kinds of aircraft types and airlines worldwide and impress with a very practical, modern design.

Long-term experience in designing, developing and production guarantee another successful and reliable product from Bucher. Contact us for more information, our Sales team is glad to assist you at any time.

Less weight – more quality

Partition Walls incl.:

- Thin and lightweight panel
- Wraparound aluminum edge protection
- Literature pockets
